Social and Health Care Colleges

in The Region of Southern Denmark

Social and Health Care Colleges in the Region of Southern Denmark

We are four separate and independent social and health care colleges in the Region of Southern Denmark working together on [Erasmus+ mobility projects](#). We provide educations for the welfare sector.

The duration of the education for [Social Health Care Helper](#) is one year and two months. It is a dual education i.e. 17 weeks at school while the remaining time consists of basic nursing training in nursing homes and in municipal home care. Social Health Care helpers are educated to perform basic health care for citizens at nursing homes and in their own homes.

The duration of education for [Social Health Care Assistant](#) is two years and ten months. It is a dual education i.e. 43-49 weeks at school while the remaining time consists of basic nursing training in three practice fields: the somatic sector, the psychiatric sector, and municipal home care. This education level is EQF 4, and Social Health Care Assistants are educated to perform basic health care for citizens in hospitals, elderly care and psychiatric care.

We also educate [Pedagogic Assistants \(PA\)](#) at level EQF 4. The duration of the education is two years and one month. PA students are trained in pedagogical work in daycare, schools and homes for physically and mentally disabled persons.

Our students are employed by the [municipality](#) and are paid a salary during their education. The age of our students varies from 16 years to about 60 years.

Some of our students go abroad for work experience. Social and health care students are mostly in practice in nursing homes and home care, while PA students primary are in practice in child care or care for the mentally and physically disabled.

The school part of the educations consists of area subjects – health and nursing studies, medical subjects, social studies, pedagogical and psychological studies, cultural studies and activity – and the core subjects Danish, English and Science.

To become a qualified Social and Health Care Helper, Social and Health Care Assistant and PA assistant, the student must pass each period of basic training, all area and core subjects and a final examination that shows that the objectives of the education as a whole have been reached.
